

## Executive summary

The establishment of synergies and coordination with BRIDGE, BDVA, and similar projects for policy, market and technology-relevant issues is a key activity within the dissemination strategy in SYNERGY.

It specifically focusses on the identification of potential synergies with other relevant European and national projects and the establishment of a common understanding through knowledge exchange and lessons learned sharing. The SYNERGY consortium is leveraging on the involvement of several partners in numerous similar projects, focusing mainly on projects under the BRIDGE initiative and BDVA umbrellas, in order to exchange experiences and create strong R&I synergies.

Relevant initiatives, activities and working groups have already been identified, which has allowed SYNERGY to join them since the very beginning of the project. BRIDGE, BDVA, OPEN DEI, and IoT LSP Programme have been the first ones in which SYNERGY has been presented, has shared information with similar projects, and has participated in workshops or webinars. Moreover, some members of the SYNERGY consortium have already joined several working groups.

On one hand, this will allow for creating visibility of the project objectives at an early stage among several communities, and on the other hand, starting networking activities with several key stakeholders, both in the energy and big-data landscape.
